COMMUNIQUÉ DE PRESSE

EENUEE AND DUQUEINE GROUP:

a key regional partnership for electric aviation

Saint-Etienne-based startup eenuee announces a strategic partnership with Duqueine Group, a leading player in composite materials, to accelerate the development of its 100% electric regional aircraft. First flight scheduled for 2029.

Low-carbon air mobility to link regions

Faced with the climate emergency and the budget constraints associated with traditional infrastructures, local authorities need light, clean, accessible mobility solutions that don't require major public investment.

eenuee's regional electric aircraft meets these challenges:

- Without the need to build major new infrastructure,
- With unrivalled energy efficiency,
- By opening up new regions.

Auvergne-Rhône-Alpes, a mountainous region where opening up is a key issue, is an ideal illustration of the need for this aerial revolution.

A structural innovation: the carrier fuselage

« The heart of our innovation is the carrier fuselage: an architecture that is more demanding to design than the classic tubular fuselage, but much more efficient. Having validated its aerodynamic qualities, our challenge now is to design it in detail with a view to certification », explains Benjamin Persiani, CEO of eenuee.

To this end, Duqueine Group will contribute its industrial expertise to the success of this novel structure, drawing on its recognized skills in aeronautical composites, as a key supplier to major programs such as the structures for the Airbus A350.

Duqueine Group, it's:

- **43 years of expertise** in high-performance composites,
- **1,000 employees** in France, Romania and Mexico,
- **Major customers:** Airbus, Safran, Dassault.

eenuee is:

- A visionary startup born in 2019, based in Saint-Étienne,
- A clear ambition: to electrify regional aviation with a certifiable, efficient and silent solution.

« This regional partnership is a major asset. It enables us to combine technological agility and local industrial strength to take a key step forward », emphasizes Benjamin Persiani.

An aircraft with exceptional performance

eenuee's future regional plane aims to redefine short-haul transport:

- **11 times less energy consumption** than equivalent aircraft,
- Up to **19 passengers**, 500 km all-electric range,
- **Take-off/landing on short runways**, even short ones, and on any surface,
- **Zero in-flight emissions**, very low noise levels.

The Auvergne-Rhône-Alpes region, a laboratory for the mobility of the future

This partnership is part of a strong regional drive for industrial innovation. It contributes to building a low-carbon aeronautics industry, strategic for the energy transition and European technological sovereignty.

About

eenuee

Founded in 2019 in Saint-Étienne, EENUEE develops ultra-efficient drones and aerial solutions to easily connect all regions of the world.

Duqueine Group

An industrial expert in high-performance composite materials for over 40 years, Duqueine Group is a strategic supplier to the aerospace, automotive, marine and high performance sports industries.
